

Connecting to the global supply chain

In recent years, the manufacturing section has transformed from stand-alone manufacturing companies to connected supply chains. These supply chains are primarily driven by brand owners of end electronics products, usually the MNCs. Local manufacturing companies, SME, supporting these companies providing raw materials, components and services such as product assembly, distribution and logistics must be able to connect to these supply chains or risk losing the business.

B2Bi Gateway that supports RosettaNet compatible data format.

B2Bi Gateway hosting solutions by Cybersite and Intrinix Networks

Lower implementation and maintenance cost. Ready to connect to your customers faster ...

The B2Bi gateway data format supports Rosettanet's format. Rosettanet has defined all the necessary data formats for the purchasing process. At the buyer and supplier ends, the B2Bi gateways are used to transfer and handle the exchange protocols of the whole process. B2Bi gateway is developed with collaboration with Singapore Institute of Manufacturing Technology (SIMTech).

Cybersite and Intrinix provide Internet server to host the B2Bi Gateway. Company subscribing to this B2Bi Business Plan will also get additional software such as web content management and email server application as part of the package. This package enable company to go on-line quickly and ripe the benefit of connecting to the global supply chain.

Business operations:

- Purchase Order and Acknowledgement
- Vendor Manage Inventory
- Logistics

Other processes can be added easily

Features

- Enables process-based collaborations, based on defined process templates
- Customises processes using a simple and intuitive graphical user interface
- Tracks message documents' status throughout the process
- Requires lightweight and low-cost infrastructure

Benefits

- Reduces need for complex and costly ICT infrastructure and maintenance
- Allows for multiple-party participation and customisation of B2Bi processes
- Reduces errors and time via context-sensitive and user-friendly GUI
- Allows for addition or modification of process templates or features
